Section I:
AMENDMENT UNDER 37 CFR §1.121 to the
CLAIMS

RECEIVED
CENTRAL FAX CENTER

MAR 02 2006

Claims 1 - 21 (withdrawn).

Claim 22 (original):

A method for preserving battery life in a portable networked client device by restricting the types of web objects received by the client device based upon battery conditions, said method comprising the steps of:

determining the condition of a battery in a networked client device;

transmitting said battery condition from said networked client device to a web server;

selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low, otherwise selecting all web objects in a web page for transmission by said web server to said client device; and

transmitting said selected web objects to said networked client device.

Claim 23 (original):

The method as set forth in Claim 22 wherein said step of selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises restricting from transmission advertisement web objects.

Claim 24 (original):

The method as set forth in Claim 22 wherein said step of selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises restricting from transmission animated graphical web objects.

Claim 25 (original):

The method as set forth in Claim 22 wherein said step of selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises restricting from transmission video segment and clip web objects.

Claim 26 (original):

The method as set forth in Claim 22 wherein said step of selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises restricting from transmission sound and audio web objects.

Claim 27 (original):

The method as set forth in Claim 22 wherein said step of selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises restricting from transmission multicolor web objects.

Claim 28 (new):

A computer readable medium encoded with software for preserving battery life in a portable networked client device by restricting the types of web objects received by the client device based upon battery conditions, said software performing the steps of:

determining the condition of a battery in a networked client device;

transmitting said battery condition from said networked client device to a web server;

selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low, otherwise selecting all web objects in a web page for transmission by said web server to said client device; and

transmitting said selected web objects to said networked client device.

Claim 29 (new):

The computer readable medium as set forth in Claim 28 wherein said software for selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises software for restricting from transmission advertisement web objects.

Claim 30 (new):

The computer readable medium as set forth in Claim 28 wherein said software for selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises software for restricting from transmission animated graphical web objects.

Claim 31 (new):

The computer readable medium as set forth in Claim 28 wherein said software for selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises software for restricting from transmission video segment and clip web objects.

Claim 32 (new):

The computer readable medium as set forth in Claim 28 wherein said software for selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises software for restricting from transmission sound and audio web objects.

Claim 33 (new):

The computer readable medium as set forth in Claim 28 wherein said software for selecting only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low comprises software for restricting from transmission multicolor web objects.

Claim 34 (new):

A system for preserving battery life in a portable networked client device by restricting the types of web objects received by the client device based upon battery conditions, said system comprising:

 a battery monitor adapted to determine the condition of a battery in a networked client device;

 a condition transmitter configured to transmit said battery condition from said networked client device to a web server;

 an object selector adapted to select only essential web objects in a web page for transmission by said web server to said client device if said battery condition is low, otherwise selecting all web objects in a web page for transmission by said web server to said client device; and

 an object transmitter configured to transmit said selected web objects to said networked client device.

Claim 35 (new):

The system as set forth in Claim 34 wherein said object selector is further adapted to restrict web objects from transmission to said client device.

Claim 36 (new):

The system as set forth in Claim 34 wherein said object selector is further adapted to restrict animated graphical web objects from transmission to said client device.

Claim 37 (new):

The system as set forth in Claim 34 wherein said object selector is further adapted to restrict video segment and clip web objects from transmission to said client device.

Claim 38 (new):

The system as set forth in Claim 34 wherein said object selector is further adapted to restrict sound and audio web objects from transmission to said client device.

Claim 39 (new):

The system as set forth in Claim 34 wherein said object selector is further adapted to restrict multicolor web objects from transmission to said client device.
